Date of assignment:-02/09/2026

Date of Submission:-02/09/2026

a. Write a Python program to create a scatter plot of Age and Height of 5 students.

```
import matplotlib.pyplot as plt

# Data of 5 students
age = [18, 19, 20, 18, 21]
height = [160, 165, 170, 158, 175]

# Create scatter plot
plt.scatter(age, height)

# Add labels and title
plt.xlabel("Age")
plt.ylabel("Height (cm)")
plt.title("Scatter Plot of Age and Height")

# Display the graph
plt.show()
```

b. Write a Python program to create a bar chart showing marks of 5 students.

```
import matplotlib.pyplot as plt

# Data of 5 students
students = ["Sapna", "Rahul", "Priya", "Neha", "Sneha"]
marks = [75, 85, 68, 90, 80]

# Create bar chart
plt.bar(students, marks)

# Add labels and title
plt.xlabel("Students")
plt.ylabel("Marks")
plt.title("Marks of 5 Students")
```

```
# Display the graph
plt.show()
```

c. Write a Python program to create a histogram showing the distribution of marks of 10 students.

```
import matplotlib.pyplot as plt

# Marks of 10 students
marks = [45, 55, 60, 65, 70, 72, 75, 80, 85, 90]

# Create histogram
plt.hist(marks, bins=5)

# Add labels and title
plt.xlabel("Marks")
plt.ylabel("Number of Students")
plt.title("Distribution of Marks of 10 Students")

# Display the histogram
plt.show()
```

d. Write a Python program to create a pie chart showing the number of students in different courses.

```
import matplotlib.pyplot as plt

# Number of students in different courses
courses = ["BSc IT", "BCA", "BSc CS", "BBA"]
students = [40, 30, 20, 10]

# Create pie chart
plt.pie(students, labels=courses, autopct="%1.1f%%")

# Add title
plt.title("Number of Students in Different Courses")

# Display the pie chart
plt.show()
```

e. Write a Python program to create a bar chart showing sales of 5 different products.

```
import matplotlib.pyplot as plt

# Sales of 5 different products
products = ["Product A", "Product B", "Product C", "Product D", "Product E"]
sales = [50, 75, 60, 90, 65]

# Create bar chart
plt.bar(products, sales)

# Add labels and title
plt.xlabel("Products")
plt.ylabel("Sales")
plt.title("Sales of 5 Different Products")

# Display the bar chart
plt.show()
```
